Sentiment Analysis on Global Opinion on International Conflict Using SenticNet

Hassan Hashmi, Abdul Rashid, Winnie Ng, Najah Tasfia Zumana
Under supervision of Dr. Ganesh Krishnasamy

1. ABSTRACT

Sentiment tools are rarely tested on conflict language. We compare SenticNet 9 with VADER on **6.50 million** Reddit and Truth Social comments. The tools agree on only **49.4%** of Reddit and **54.0%** of Truth Social comments. Against **1,000 hand-labelled** comments, VADER matched humans **51.1%** of the time and SenticNet **36.8%**.

6.50M comments analysed	**2** platforms
38 months of Reddit	**1,000** human labels

2. PROBLEM STATEMENT

Millions of conflict comments are too many to read by hand.

Tools are built on reviews and tweets, not war discourse.

If tools disagree, the public mood depends on the tool chosen.

3. PROJECT OBJECTIVES

Measure how often SenticNet and VADER agree.

Compare platforms and change over time.

Check both tools against human labels.

"Stop the war, too many innocent people are dying."

SenticNet +0.541 **VADER −0.57**

Figure 1: One comment, two opposite scores.

4. METHODOLOGY

Collect comments
Clean the text
Score: SenticNet + VADER
Bucket: positive / neutral / negative
Compare the two tools
Check against human labels
Dashboard and paper

Figure 2: Analysis pipeline, run locally in Python.

5. DATA

Source	Period	Comment
Reddit, full	Sep 2023-Oct 2026	4,230,886
Reddit, earlier	Oct-Nov 2023	686,276
Reddit, earlier	Jun 2025-Aug 2026	1,233,208
Truth Social	Feb-Apr 2026	345,974
Total		**6,496,344**

Table 1: Datasets scored.

Top subreddits

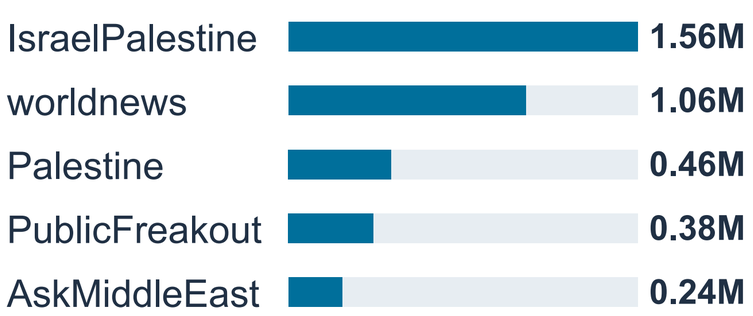

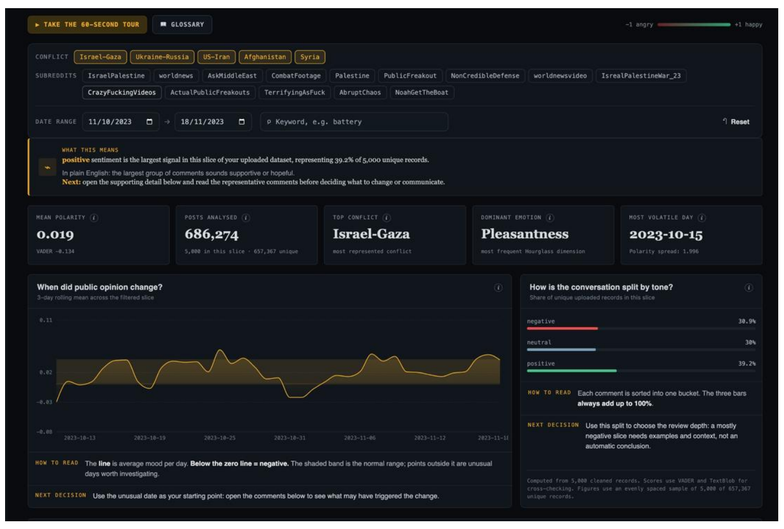

Figure 3: Comments per subreddit (top 5).

6. PROJECT DELIVERABLES

- Scored dataset of 6.50M comments.
- Interactive Dashboard
- Research paper.

7. OUTCOMES

Tools agree on only half

	VADER negative	VADER neutral	VADER positive
SenticNet negative	821k	217k	266k
SenticNet neutral	335k	308k	212k
SenticNet positive	766k	347k	959k

Figure 4: Reddit agreement matrix

SenticNet reads more positive

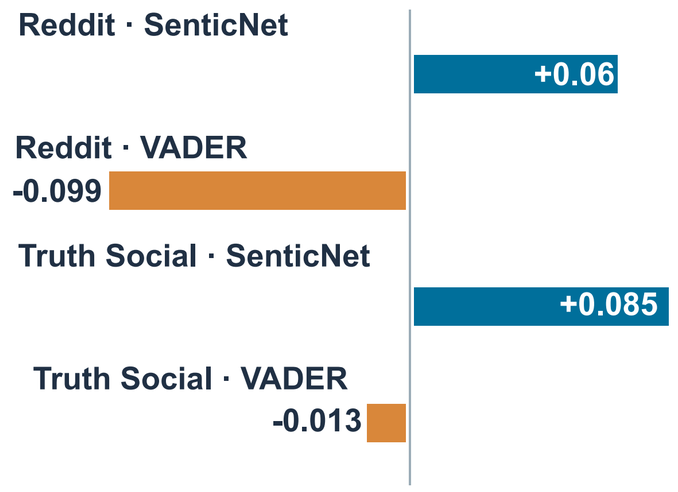

Figure 5: Mean sentiment score by tool.

Accuracy against humans

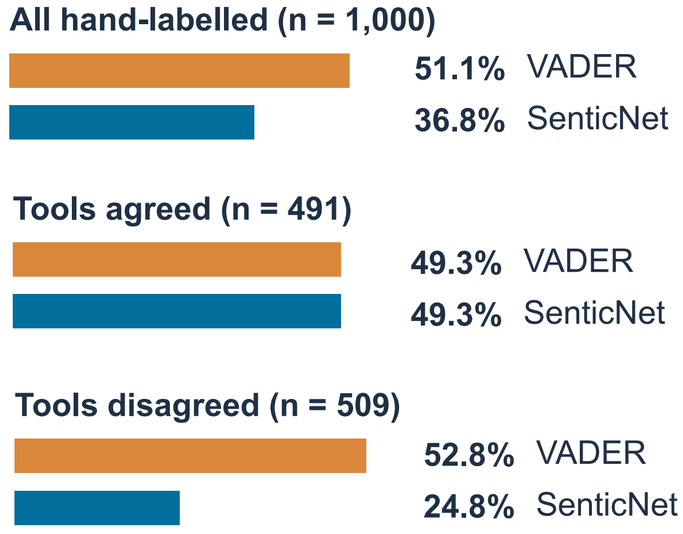

Figure 6: Share matching the human label. The sample is mixed and mostly negative, so this is not accuracy across all comments.

KEY TAKEAWAY

Neither tool is reliable on conflict text. VADER came closer to human labels.
